## Go Virtual Software Newsletter

Go Virtual would like to briefly inform you on the recent updates of our software portfolio.

### Version 17.1 R4 available

- New export features for OpenFOAM such as cell sets
- A new native interface to the TAU CFD solver
- Enhanced export/import options with GridPro
- More information is available at [www.pointwise.com](http://www.pointwise.com).

### Outcome of User Group meeting

- Metacomp announced that a highly updated GUI is on the way with lots of revolutionary new integrated modules.
- Customers from all over the world attended this meeting and also had their interesting presentations.
- Version 14.1 is expected to be released in November 2013.
- More information is available at [www.metacomptech.com](http://www.metacomptech.com).

### Version 14 New Release

- Multiple-window operations
- Curved Vectors
- CFD Data Management using XDB files
- Designed for scalability and every FieldView license will run on 8 CPU cores
- Improved Transient Particle Path
- More information is available at [www.ilight.com](http://www.ilight.com).

THESEUS FE

### State-of-the-art Heat transfer calculation tool

- A professional software tool for steady-state and fully transient thermal management applications
- Complete cabin interior analysis including passenger comfort studies
- Stands out due to its new, innovative, easy-to-learn and clear structured graphics user interface (GUI)
- Cutting-edge algorithms deliver the solution faster than other software codes
- More information is available at [www.theseus-fe.com](http://www.theseus-fe.com)
